

EE 565A – Computer Communication Networks I (with practical hands-on project)

Computer Networks are the backbone of the whole internet enabling us to communicate across the earth. Take this course to learn about how YouTube, Netflix, Amazon and many other big companies provide you amazing services online.

This project-driven course will take you on a journey through important technologies in wired networks:

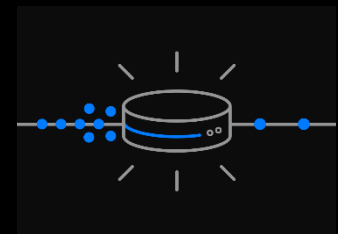

- Physical wires and wireless signals
- Medium Access Control (MAC Layer)
- Internet Routing (Network Layer)
- TCP/IP (Transport Layer)
- Building an actual web application from scratch.

Credits: 4 cr
