

# **RISING** **OCT 24 -25** **STARS** **in EECS** **at MIT**

Rising Stars in EECS is a workshop for graduate students and postdocs of historically marginalized or underrepresented genders who are interested in pursuing academic careers in electrical engineering, computer science, and artificial intelligence and decision making.

This year's event will bring participants together for two days of scientific interactions and discussions about navigating the early stages of careers in academia.

Our program includes invited presentations on preparing for the academic search process, giving effective job talks, and developing and refining research and teaching statements. Panel discussions will focus on the first years of an academic career, covering topics such as forming and ramping up a research group, leadership, maintaining work-life balance, fundraising, and going through the promotion process.

**Apply by June 14**
