Staff Controls
Engineer

The ECE Industry Mentorship Program is launching a new set of career panels featuring mentors from across the industry. All ECE students are invited to attend these informal conversations to hear mentors share insights about their career paths, the companies they represent, and their experiences in the field. You'll also have the opportunity to ask questions and get advice directly from professionals. It's a great chance to explore career possibilities, build connections, and gain insider perspectives that can help you plan your next steps.
