

# **Transforming the Northwest Energy System NWESS 2022**

**University of Washington  
Virtual, UW ZOOM  
April 6-7, 2022**

**Speaker: Angela Song, TE Portfolio Manager, Electrification & Strategic Technology**

**Title: Seattle City Light Transportation Electrification Strategy**

**Abstract:** Seattle is working to meet aggressive goals to electrify everything that moves people, goods, and services in and throughout the City. With 60% of city emissions coming from the complex and dynamic transportation sector, the city developed a strategic investment plan to identify the pathways, stakeholders, opportunities, and challenges of achieving this goal. This session will introduce this plan, the strategy behind it, and some key projects that are informing City Light's approach to decarbonizing the transportation sector.

**Bio:** Angela is the Transportation Electrification Portfolio Manager at Seattle City Light. She is designing, implementing, and managing transportation electrification projects. Before Seattle City Light, Angela was an Air Quality Specialist at the Puget Sound Clean Air Agency. She also managed the Western Washington Clean Cities Coalition to implement strategies and programs to reduce transportation emissions through alternative fuels.
